What is SPES Historical Fencing Gear? We are just as passionate as you are. In the beginning, we made clothes and arming garments for Medieval re-enactors. Lately, we have decided to expand our services to include the lovers of historical fencing. This community grows year on year and its members increase their exploration of the arcana of fencing based on the historical treaties. SPES Historical Fencing Gear came into existence with the idea of enhancing your safety during training in the Historic European Martial Arts.

The first piece of protective equipment that we designed was produced in 2007 for the needs of the Fechtschule Gdansk in cooperation with Andrzej Zmuda Trzebiatowski and Jan Chodkiewicz. Since then, we have been collaborating with various fencing schools from Poland and Sweden in the process of designing and testing our products. We rely on our many years of experience in designing and producing arming garments.

Products designed by us are created according to your needs. That is why, we are constantly gathering information and suggestions from fencing schools about their expectations of the protective equipment used during combat. This knowledge is a base which we use to design new and to modify old protectors to make them safer and more functional. When you visit our website, you may be sure that the products you see there have already passed combat tests!

Thanks to close cooperation with users of our protective gear (ourselves included), our products let you feel safer and more comfortable while fighting, and let you enjoy the combat without needing to worry about safety. If you think that our products need to be upgraded or if you need anything new, do not hesitate to write to us. All opinions and suggestions are more than welcome.

We are open to any cooperation with fencing groups. Feel free to contact us. We will be glad to welcome you to the group of SPES Historical Fencing Gear's friends.

## Product features

Main goals for our products are:

- provide user's safety
- provide great mobility during combat

Our products are constantly tested and modified to meet those goals to the highest possible level. Therefore, we use methods that proved to work over the years. We use complex patterns which let us produce protection gear with good level of arm mobility.

As it is commonly known, many products that are available on market at present does not make the use of "high" techniques in long sword combats easy. That is why, we propose our products to you which are designed with the special care paid to the difficult fencing techniques and demanding clients.

Our first products were produced for the needs of Polish groups of Historical European Martial Arts (HEMA) and were especially designed for the use during long sword combat. Because they worked well during fights with long sword, they are also good for fencing with other weapons.

Good mobility during combat and user safety are not the only advantages of our products. It is also the possibility to extend the protection. Our jackets "Fechtschule Gdansk" and "Axel Petterssons Fencing Jacket" may be used as a basic element to protect body and arms but to provide yourself with more safety you can use elbow protectors. Torso and shoulder safety in these types of gambeson is additionally increased to protect against injuries of these body parts.

Almost all of our protection gear may be used independently or with cooperation with other elements to provide additional safeness. For example, as an addition to "Fechtschule Gdansk" gambeson, you may use Body Protector, Padded Skirt, Forearm Protectors etc. On the other hand, you can use those elements independently (without the gambeson).

We are taking into consideration all users' suggestions and ideas to make sure that our gear fulfills all of your needs and expectations and lets you maximize the enjoyment of combat!

# „Axel Pettersson“ Fencing Jacket PRO

## Description:

New model of Axel Pettersson Fencing Jacket is a combination of wearing comfort with high level of protection. The design is based on previous model (1.1), highly valued among the historical fencing devotees.

It is equipped with fasteners for mounting an additional protection – detachable, specially shaped, plastic pads. It lets you use the jacket as a full protection without necessity of wearing additional protectors. You save your time which you may spent for training instead of waisting it for the preparing.

To increase the protection level the jacket has additional layer of leather in front, attached with Velcro tapes. It improves the effectiveness of protection without lessening the wearing comfort.

Also the collar has been changed, redesigned to make it more fit-to-shape of the body. We added an additional mounting for leather front plate – a torso protector against the stubs. As in previous model collar has a blade-catcher to keep larynx safe.

Thanks to the new design, the Axel Pettersson Fencing Jacket PRO is perfect, comprehensive protection recommended to all historical fencing devotees. It offers high level of protection along with very good wearing comfort letting users fully enjoy the fights and trainings.

# „Axel Pettersson“ Fencing Jacket

## Description:

This fencing jacket was designed with the help and suggestions of Axel Pettersson, to serve the needs of the Swedish schools of historical fencing („Gothenburg Historical Fencing School“ in particular).

The jacket closes in front (see the picture) with the help of a zipper and velcro. On the front of the collar, there is a broad overlap which closes with velcro. The sleeves are specially designed for better arm movement. Also, there are additional protective layers on the chest, shoulders and elbows. The layers of fabric (from the outside) are: 1 layer of cotton, one protective layer, and 1 layer of lining.

The jacket was tested at many seminars as well as one in Helsinki on 9-11.08.2011 lead by Axel Pettersson.

Upgraded version: V1.1 (after Swordfish 2011)

Upgrades:

1. thicken protective layer on the ribs and the front
2. slightly shorter sleeves
3. collar consist blade catcher at the neck line

# Women's „Axel Pettersson“ Fencing Jacket

## Description:

Women's model of Axel Pettersson Fencing jacket is a product designed on a base of a male version which was created with a help and suggestions of Axel Pettersson, also („Gothenburg Historical Fencing School“ in particular), to serve needs of historical fencing in a best possible way. Noticing growing group of ladies within HEMA community along with growing popularity of this Jacket model we decided to redesign it in a best way to be suitable for ladies anatomical shape.

Except the fact that it is well-fitted, jacket keeps all the assets of male model such as fold on the front fastened with zipper and Velcro, special collar with Velcro and blade catcher in front. Also the special construction of the sleeves for better arm movement during fighting.

To increase the protection level jacket has thick amortization layers on the chest, ribs, shoulders and elbows. The construction consist layers such as: outer layer (made of durable cotton fabric), amortization layer and inside lining (same colour as outer).

All the examples of Woman's Axel Pettersson jacket are equipped with new, stronger zipper YKK with durability of 90kg/cm. It's „reverse“ type which helps to prevent from accidental hooking it with the weapon when fighting.

# Fechtschule Gdansk Gambeson PRO

## Description:

The new model of Fechtschule Gdansk Gambeson PRO is based on previous, well known and valued Gambeson designed with help of Fechtschule Gdansk school of Historical Fencing. All changes introduced are aimed to increase the level of safety as well as the pleasure of wearing our protection gear.

New model is equipped with fasteners for mounting an additional protection – detachable, specially shaped, plastic pads. It lets you use the jacket as a full protection without necessity of wearing additional protectors to save the arm from hits. It also shortens the preparation time before training letting you enjoy the fight longer.

We resigned from the traditional fastening way with leather thongs. Now the jacket has zipper and Velcro tapes what help put in gambeson much faster.

Additionally the fabric in this model has been changed from standard linen to more comfortable, stronger and worn-resistant cotton.

# Fechtschule Gdansk Gambeson

## Description:

Specially designed model for ARMA and FEDER. Also with advice from the experience of Jan Chodkiewicz of Fechtschule Gdansk Historical Martial Arts School.

It has a special system of layers which guarantees maximum protection and mobility with the minimal arming protection. Additionally it protects the body from stabs and cuts. The torso and the neck have overlaps which protect against thrusts. The gambeson is tailored in a way that its lower part sits on the hips. The sleeves are made of 3 elements to guarantee the best mobility of the elbows. For the mobility of the shoulders, we use special deep-set sleeves as well as gussets in the armpits.

The Fechtschule gambeson is composed of: 1 layer of linen (outer); 2 layers of cotton; 1 thick, thickly woven, woollen fabric layer; and finally a very sturdy cotton layer. On the shoulders, the number of protective layers increase from 1 to 3.

The gambeson is made of linen to keep historical correctness as much as possible. Using gambeson made of linen, it is necessary to remember that this fabric is less resistant (than for example cotton) for contact with sharp elements or materials such as Velcro tape. From that reason you should be careful using this gambeson with other protection gear.

# Basic Fechtschule Gambeson

## Description:

Specially designed (for ARMA and FEDER) model of gambeson. It has a special system of layers which guarantees maximum protection and mobility with the minimal arming protection. Additionally, it protects the body from stabs and cuts. The torso and the neck have overlaps which protect from thrusts. The gambeson is tailored in a way that the lower part sits on the hips. The two-piece construction of the sleeves guarantees the best mobility of the elbows. For the mobility of the shoulders, we use a special deep-set sleeves as well gussets in the armpits.

This gambeson is composed of: 1 double, very resistant layer of cotton (outer); 1 wadding layer; and finally cotton layer (inner). On the shoulders, the number of protective layers increase from 1 to 3. On the chest, the number of protective layers increase from 1 to 2. The lacing consists of 12 leather straps and 6 leather bindings.

This model was made with cooperation with „Fechtschule Gdansk“ and Jan Chodkiewicz.

# Leather fencing mask and occipital overlay

## Description:

Integrated fencing mask overlay with occipital protector is a great combination of protection against quick tear and wear of the mask with back of the head cover from injuries during the historical fencing trainings.

The overlay is made of strong leather and amortization layer. Occipital protection has the filling made of 1cm thick plastic foam and two overlapping plastic plates. Whole construction is elastic and has strong protection level. There is no gaps between plastic plates to weaken the construction.

Integrated fencing mask overlay with occipital protector is mounted onto the fencing mask and kept in place with elastic belt below the mask. Additional mounting point, made of Velcro tape, is added between occipital part and mask overlay - it helps to keep the overlay more stable on the mask. Additional tape with Velcro on the back of the overlay allows its easy removing from the mask, also keeps the occipital protector close to the back of the head to minimize risk of accidental hit.

Construction of the overlay has been modified thanks to our customers opinions about the other products.

Overlay should fit all commonly used fencing mask models.

# Integrated mask overlay with occipital protection „Trinity“

## Description:

Mask overlay with integrated occipital protection is a technologically advanced product. The front and sides of the mask refer to hoods used in medieval times. It is the only overlay that is commercially produced which protects larynx, shoulders and occipital bone. It fits most of commonly used masks.

A significant element of this overlay is a plastic insertion to protect the larynx from painful thrusts. Additionally, the overlay has quilted shoulder protector and a movable occipital cover which is strengthened with plastic plates. The most important aspect of this overlay is the effective neck protection.

Mask not included.

# Forearm and elbow protectors v2.0

## Description:

The forearm protectors help to lessen the threat of injury during frequent historical fencing training. Additionally this model has elbow protection.

Made of sturdy fabric and super-hard profiled plastic inserts, gives you high level of protection during fight. The elbow protection, an extension of the forearm protector, is specially shaped to provide the most protection for the elbows possible without impeding movement.

Forearm and elbow protector version 2.0, modified in our offer from 01/11/2013:

- achieved better protection thanks to single-element elbow protector made of polypropylene,
- better fitting PP bowl for the elbow; in comparison with the previous version, the elbow element does not stick out from the arm,
- eliminated weak protected place between elbow and forearm - previous version had 1,5cm gap. In version 2.0 elements overlap each other eliminating the gap,
- additional elastic tape on the back of elbow part makes this element stay better in place without moving,
- Velcro tape mounting of forearm part gives you the possibility of adjustment of the whole protector length,
- possibility to detach the elbow part if necessary.

Sold as a pair.

# SPES heavy gloves version 1.0

## Description:

The SPES heavy gloves v. 1.0 are designed to protect your palms which are exposed to injuries during trainings of historical fencing. Our protective heavy gloves provide full cover for four fingers and thumb. The outside part of the palm and fingers are also protected by the overlapping plastic elements. The 11cm cuff made of fabric is reinforced by six covered with leather elements. On the wrist there is also a leather belt with a buckle which enables the fencer to better adjust the glove to fit the palm. Sold as a pair.

SPES heavy gloves v. 1.0. Upgrades in comparison to the 0.9 version since (1.05.2014):

- more comfortable gloves with three fingers,
- increased protection and stiffening of the thumb thanks to applying more protective elements,
- additional layer of leather stiffens and protects the wrist and the palm,
- the leather belt with a buckle gives the possibility of a better adjustment of the glove to the palm,
- longer cuff and additional protective elements covered with leather,
- the inner part of the gloves is covered with synthetic leather,
- more comfortable way of fastening the plastic elements to the glove,
- new more durable rivets.

# Historical fencing pants

## Description:

Breeches specially designed for historical fencing trainings. Made of durable cotton fabric. Length just below the knee. Elastic ribbing at the end of the leg below the knee. Breeches have high waist and are kept in place thanks to elastic braces fastened with plastic clasps with length regulation.

Breeches are equipped with three internal pockets on each side, at the hip, and on outer and inner part of thigh. They may be filled with plastic foam to increase protection level of the breeches. It's easy to remove the foam for example to wash the breeches.

Front of the legs strengthened with quilting. To increase mobility an elastic piece of fabric has been sewn into the crotch. Bottom part of the legs has been equipped with mounting points which are designed specially to attach additional knee protectors (it is an option to extend the whole leg protection).

On the back there are two pockets closed with Velcro tape.

Characteristic points:

1. Elastic braces with clasp and with length regulation
2. Pockets with foam insertion/pads
3. Elastic piece of fabric to increase mobility
4. Mounting points for additional knee protectors
5. Knee-part with quilting

S - XL

#### Weight:

0,25kg

### Wooden longsword

Wooden longsword made of ash with guard. This type of swords were widely used in medieval times during fencing training. They help to improve sword maneuvering skills without major body injuries. Especially recommended for beginners. Blade section 2x5cm.

#### Dimensions:

Blade/total/guard length: ~77/105/24cm

#### Weight:

0,95kg

### Wooden sword

Wooden sword made of ash with straight guard. This type of swords were widely used in medieval times during fencing training. They help to improve sword maneuvering skills without major body injuries. Especially recommended for beginners. Blade section 3x5 cm.

#### Dimensions:

Blade/total/guard length: ~69/92/15cm

#### Weight:

1,05kg

### Training broadsword - standard

Blade made of soft, elastic components, gives you full safety during trainings. Outer fabric guarantees long life of product and high resistance for any damage of blade. Simulator of the white weapon, designed for training in pairs without heavy strenght involved. Plastic hilt is covered with rubber for stronger and stable grip. Additional protection is given by plastic guard. Straight blade with rectangular section.

#### Dimensions:

Blade/total length: ~64/81cm

#### Weight:

0,45kg

### Training broadsword - heavy

Blade made of soft, elastic components, gives you full safety during trainings. Outer fabric guarantees long life of product and high resistance for any damage of blade. Additional core hardening. Simulator of the white weapon, designed for thrusting practice, or for light training in pairs without heavy strenght involved. Plastic hilt is covered with rubber. Additional protection is given by plastic guard. Straight blade with rectangular section.

#### Dimensions:

Blade/total length: ~77/94cm

#### Weight:

0,55kg

### Training sword with cross guard/long

Two-handed sword. Blade made of soft, elastic components, gives you full safety during trainings. Outer fabric guarantees long life of product and high resistance for any damage of blade. Additional core hardening. Plastic hilt is covered with rubber. Cross guard to protect hands against injuries. Designed for thrusting practice, or for light training in pairs without heavy strenght involved. Straight blade with circular section.

#### Dimensions:

Blade/total lenght: ~88/115cm ~84/120cm

#### Weight:

0,71/0,84kg

### Training rapier

Blade made of soft, elastic components, gives you full safety during trainings. Outer fabric guarantees long life of product and high resistance for any damage of blade. Simulator of the white weapon, designed for thrusting practice, or for light training in pairs without heavy strenght involved. Plastic hilt is covered with rubber. Rounded guard is made of plastic, soft disc with openwork design. Straight blade with circular section.

#### Dimensions:

Blade/total lenght: ~64/82cm

#### Weight:

0,27kg

### Training sabre - standard

Blade made of soft, elastic components. Simulator of the white weapon, designed for thrusting practice, or for light training in pairs without heavy strenght involved. Plastic hilt is covered with rubber for stronger and stable grip. Additional protection against hand injuries is given by plastic guard. Blade section: rectangular. Inclination of blade curve: ~5cm

#### Dimensions:

Blade/total lenght: ~65/82cm

#### Weight:

0,45kg

### Training sabre - heavy

Blade made of soft, elastic components has an additional core hardening. Simulator of the white weapon, designed for thrusting practice, or for light training in pairs without heavy strenght involved. Plastic hilt is covered with rubber for stronger and stable grip. Additional protection against hand injuries is given by plastic guard. Blade section: rectangular. Inclination of blade curve: ~5cm.

#### Dimensions:

Blade/total lenght: ~78/94cm

#### Weight:

0,54kg

### Training sword - katana

Two-handed sword. Blade made of soft, elastic components has an additional core hardening. Simulator of the white weapon, designed for thrusting practice, or for light training in pairs without heavy strenght involved. Plastic hilt is covered with rubber for stronger and stable grip. Rounded guard is made of plastic, soft disc with openwork design. Straight blade with rectangular section.

#### Dimensions:

Blade/total lenght: ~77/105cm

#### Weight:

0,65kg

### Wooden dagger/Wooden dagger - short

Wooden dagger made of ash. Blade pointed with ball for safety use. This type of daggers were widely used in medieval times during fencing training. They help to improve sword maneuvering skills without major body injuries. Especially recommended for beginners. Phi ( $\phi$ ): 1,7-4cm.

#### Dimensions:

Blade/total length: ~29/46cm ~25/39cm

#### Weight:

0,25kg

### Wooden dussack

Wooden dussack is our modern interpretation of training weapon which used to be made of wood or sometimes leather. Dussack was used by training groups across many centuries as a simulator of short, single-edged weapons.

Our dussack is perfect for all who start fencing lessons. This weapon is made of beech wood.

#### Dimensions:

Blade/total length/thickness: ~59/81/1,2cm

#### Weight:

0,45kg

### Synthetic dussack

Synthetic dussack is our modern interpretation of training weapon which used to be made of wood or sometimes leather. Dussack was used by training groups across many centuries as a simulator of short, single-edged weapons. Our product, thanks to being made of polyamide, is very durable and safe to use. If you need a resistant dussack for intensive and dynamic trainings, our offer is a perfect response to your needs.

#### Dimensions:

Blade/total length/thickness: ~59/81/1cm

#### Weight:

0,6kg

## Sizing

Products offered in our Shop are available in standard sizes. Also there is possibility to order gambesons, jackets or doublets to fit personal measurements - tailor-made. Price of made to measure product is increased of 30% and customer is oblige to send us necessary measurements. In case of products made to measure appropriate Terms and Condition points are binding (II/9, IV/2, IV/6). For more information please visit our site: [www.histfenc.com](http://www.histfenc.com).

Below you may find information table which has an information about necessary measurements needed to make custom product and tips how to take them properly. Standard sizes informations are located at each product card.

INDIVIDUAL MEASUREMENTS TABLE

Measurement type	Measurement taking method
1. Height	Taken from bottom of foot to top of the head

At [www.histfenc.com](http://www.histfenc.com) "Sizing" subpage you may find pictures showing how to take the measurments properly.

## Ordering

Best way to place an order is to use our website shop at: [www.histfenc.com](http://www.histfenc.com). The order is being processed since we receive the payment for it. If the chosen products are in stock, we usually send the parcel within 3 working days. If not, the time of realization may extend up to 30 working days because we have to produce the products. In some special cases (like products made for personal measurements or those with modifications for customer's request), the production process may take more time. In such situations, you will be informed by phone or email.

## Shipment

Usually we use UPS Courier shipment method for all orders. In some cases (small parcel, non EU countries) we may use Polish Mail services to lower the costs of deliery. UPS Courier provides the tracking system which let you know where your parcel is and when will be delivered.

To check approximately time of delivery go to our website. You may also check the delivery prices there which are dependable from shipment method, area of delivery and weight of ordered goods.

If you have any questions please do not hesitate to contact us by email or phone.
